Upagraha

Corresponding to each planet, a sub-planet (Upagraha) is calculated. The sub planets of Moon, Venus, Mars, Rahu and Ketu are based on the longitude of the Sun as follows.

Dhumadi Group of Sub-Planets

| Planet | Upagraha | Method of Calculation |
|--------|----------------------|--|
| Mars | Dhuma | Longitude of Sun + 133 Deg. 20 Min. |
| Rahu | Vyatipata (Pata) | 360 - Dhuma |
| Moon | Parivesh (Paridhi) | 180 + Vyatipata (Pata) |
| Venus | Indrachapa (Kodanda) | 360 - Parivesh (Paridhi) |
| Ketu | Upaketu | Indrachapa (Kodanda) + 16 Deg. 40 Min. |

The sub-planets of Sun, Mercury, Jupiter, Saturn and an additional sub-planet of Mars are calculated based on the division of day or night into eight equal parts.

The first part belongs to the lord of the day, followed by the remaining lords of the week in cyclic order. The eight part is lordless. In the case of birth at night, out of the eight equal parts, the first seven are allotted to the lords of the planets starting from the 5th. weekday.

Two different methods are popularly adopted for finding the longitude. In the first method an ascendant is calculated for the beginning of the period ruled by the planet. In the second method, the end of the period is taken.

In the case of Gulika, the sub-planet of Saturn, a third method is also available to calculate the longitude of the dhumadi group of subplanets based on fixed values of rise time as given below. The value calculated thus is termed MAANDI in Astro-Vision Horoscope and presented along with the principal planets in the Rasi Chart.

| Days | Birth during day | Birth during night |
